Enhance and revitalize your lower face and neck with PrecisionTx.

Take the next step to a fresher more youthful appearance without the look of being done. PrecisionTx delivers laser energy under the skin to treat fat and tighten tissue¹. This one time treatment offers minimal downtime and increases collagen production which improves skin elasticity, thickness and texture.

How does it work?

PrecisionTx is a minimally invasive procedure to treat small areas of fat in areas such as the lower face and neck or arms. Through a small incision a very thin tube containing the PrecisionTx laser fiber is inserted and delivers thermal energy directly to the treatment area.

What results can I expect?

For most people, results are achieved in just one treatment. Speak with your physician about what you can expect post-treatment.

Treatment plans can be adjusted to fit everyone's lifestyle – speak to your provider regarding desired downtime, comfort, and results.*

Schedule your treatment session today.

*Individual results may vary and are not guaranteed.

¹ Through coagulation of soft tissue.
